Titre	Nemaline bodies as unique pathological feature in the course of treated dermatomyositis.
Type de publication	Article de revue
Auteur	Letournel, Franck [1], Le Clec'h, C. [2], Croué, Anne [3], Marcorelles, P. [4], Lavigne, C. [5], Péniisson-Besnier, Isabelle [6]
Editeur	Dustri-Verlag
Type	Article scientifique dans une revue à comité de lecture
Année	2009
Langue	Anglais
Date	2009/12
Numéro	6
Pagination	357 - 360
Volume	29
Titre de la revue	Clinical neuropathology
ISSN	0722-5091
Résumé en anglais	Dermatomyositis was diagnosed on clinical and muscle histological criteria in a 42-year-old woman. Despite treatment, the patient complained of deterioration of her muscle condition. Since her symptoms were discordant with the rest of the data, muscle biopsy was performed and disclosed rod-bearing non-atrophic fibers as the unique and predominant pathological feature. Their significance is examined in this paper.
